INLINK DEVELOPS SAFETY TECHNOLOGY FOR ELEVATORS

Inlink Technologies has created an internet-enabled video surveillance system that enhances the security, safety, appearance and management of elevators in high-rise buildings. Intellicam is accessed through Inlink Media LCD advertising screens, which are installed in elevators and lobbies. In the event of an emergency, the screens become instant two-way video communication between a security desk and the elevator. Inlink claims Intellicam is the world's most intelligent video security and safety system for elevators. "Current available elevator camera systems still rely on traditional CCTV technology ... Intellicam is a new generation of intelligent elevator camera technology, which promises to fully address the problems with existing market solutions and revolutionise elevator security standards," says Oliver Roydhouse, managing director at Inlink Technologies. Intellicam also monitors the number of people using an elevator, detects the misuse of swipe cards, and features video archiving, analysis and search capabilities.
